Introduction to General Relativity

AMATH 475

Prof. Eduardo Martin-martinez

LaTeXed by Sibelius Peng

Preface

Disclaimer Much of the information on this set of notes is transcribed directly/indirectly from the lectures of AMATH 475 during Winter 2020 as well as other related resources. I do not make any warranties about the completeness, reliability and accuracy of this set of notes. Use at your own risk.

For any questions, send me an email via `https://notes.sibeliusp.com/contact/`.

You can find my notes for other courses on `https://notes.sibeliusp.com/`.

Index notation

$$A = \begin{pmatrix} A^1{}_1 & A^1{}_2 \\ A^2{}_1 & A^2{}_2 \end{pmatrix} \qquad B = \begin{pmatrix} B^1{}_1 & B^1{}_2 \\ B^2{}_1 & B^2{}_2 \end{pmatrix}$$

$$(A \cdot B)^a{}_b = A^a{}_c B^c{}_b = B^c{}_b A^a{}_c \qquad \text{sum over all possible } c$$

Identify followings:

$$B_\kappa{}^\nu A_\mu{}^\kappa = A_\mu{}^\kappa B_\kappa{}^\nu = C_\mu{}^\nu = (A \cdot B)_\mu{}^\nu$$

$$A^\kappa{}_\mu B_\kappa{}^\nu = D_\mu{}^\nu = (A^T)_\mu{}^\kappa B_\kappa{}^\nu = (A^T \cdot B)_\mu{}^\kappa$$

$$A_\kappa{}^\nu B_\mu{}^\kappa = E_\mu{}^\nu = (B \cdot A)_\mu{}^\nu$$

$$A^\kappa{}_\mu B^\nu{}_\kappa = (A^T)_\mu{}^\kappa (B^T)_\kappa{}^\nu = \Big((B \cdot A)^T\Big)_\mu{}^\nu$$

$\mathbf{v} = v^1\mathbf{e}_1 + v^2\mathbf{e}_2 \qquad \{\mathbf{e}_1, \mathbf{e}_2\}$ Basis 1.

$\mathbf{v} = v^a\mathbf{e}_a = v'^a\mathbf{e}'_a \qquad \{\mathbf{e}'_1, \mathbf{e}'_2\}$ Basis 2.

Change of basis matrix Λ

$$\mathbf{e}'_a = \Lambda_a{}^b\mathbf{e}_b$$
$$v'^a = \tilde{\Lambda}^a{}_b v^b$$

$$\begin{aligned} v^a\mathbf{e}_a &= v'^a\mathbf{e}'_a \\ &= \tilde{\Lambda}^a{}_b v^b \Lambda_a{}^c \mathbf{e}_c \\ &= \tilde{\Lambda}^a{}_b \Lambda_a{}^c v^b \mathbf{e}_c \\ &= \underbrace{\Big(\tilde{\Lambda}^T\Big)_b{}^a \; \Lambda_a{}^c}_{\delta_b^c} v^b \mathbf{e}_c \\ &= v^b\mathbf{e}_b \end{aligned}$$

$$\implies \left(\tilde{\Lambda}^T\right)_b{}^a \Lambda_a{}^c = \delta_b^c$$
$$\tilde{\Lambda}^T \cdot \Lambda = \mathbb{1}$$

$\tilde{\Lambda}^T$ is the inverse transpose of Λ

covariant and contravariant object

A covariant object is an object that under change of basis transforms like the elements of a basis. Λ. (sub-indices)

A contravariant object transforms like components of vectors. ($\tilde{\Lambda} = (\lambda^T)^{-1}$). (super-indices)
